

The Following Instructions must be followed to ensure Top Quality Silage.

1. Co-op Source Bale Wrap should only be applied at a maximum of 70% Pre-stretch under a controlled tension.
2. A minimum of 4 layers of Co-op Source Bale Wrap must be applied to all of the bale with a 50% overlap.
3. In High Dry Matter crops and in extreme Temperatures a minimum of 6 layers of Co-op Source Bale Wrap should be applied to all of the bale.
4. Care must be taken to ensure that wrapped bales are not punctured.
5. A firm bale should be constructed using netting or net replacement film.
6. Bales should be stored on an even surface at least 10m away from any watercourse.
7. Bales should not be stacked more than 3 high and soft or leafy bales should be restricted to single layers.
8. Co-op Source Bale Wrap should be stored inside in Dry conditions and at temperatures not exceeding 25deg C.
9. Co-op Source Bale Wrap should be handled with great care to ensure no damage occurs to the roll or reel edges.
